WHATS YOUR NUMBER?

PDF WORKSHEET

WHATS YOUR NUMBER

How many leads per week or month do you need into your business in order to keep X amount of teams in work all year round?

Knowing **exactly** how many leads you require each and every month into your business is pivotal to your business success and more importantly for **clarity** for you that things are 'ok' or that things **need to change** and quickly!

It's **vital** you follow this exercise and know the amount of leads you require each month in order to keep the **diary full** and your **teams in work**.

Let's look at how we can figure this out.

(This exercise is completed on the law of averages)

TRADE
COACH

Before we go on we must look at what our average job size is and the easiest way to figure this out is complete an average of your last 10 jobs. To do this simply add your last 10 jobs sizes by days and divide by ten.

example

$$8+9+24+14+4+9+9+7+8+8 = 100$$

$$100/10 = 10 \text{ days Average Job size}$$

10

With an average job size of 10 days this equates to 2 weeks work for a 5 day week for one team. With 50 working weeks in the year we require **25 jobs for one team...** How many teams do you have? Lets say **2** teams....

50

We require 50 jobs per year to keep 2 teams in work

TRADE
COACH

So how do we know if we get enough leads to **guarantee** 50 jobs a year!! - **Easy!**

First we must figure out our **average** Lead to appointment conversion. How many leads came into your business and how many **converted** to a qualified lead

(example)

There are a few ways to work this out, I prefer to reverse engineer this.....

If we require **50 jobs per year** and we know that we have a conversion rate of **50%** from lead to qualified therefore we of course require **100 qualified leads** to ensure at 50% conversion we sell **50**.

Knowing we need 100 leads to guarantee 50 sales and knowing our conversion rate from lead to qualified is 50% we require 200 leads to guarantee 100 leads to guarantee 50 sales to fill 2 teams.

TRADE
COACH

In this scenario this company requires 200 leads per year in order to guarantee work for 2 teams (50 jobs sold)

$$200 / 12 \text{ months} = 16.6 \text{ leads per month}$$

This companies **number** is

16.6

TRADE
COACH

Print this Easy to use worksheet

Average job size - days

Amount of teams -

Amount of sales required per team per year.....

Amount of sales required for Teams

Lead to qualified Lead %. -

Qualified Lead to Sale %. -

Reverse engineer this

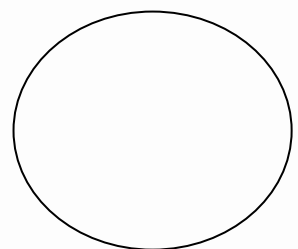

We require sales to fill all teams (see above)

To ensure sales we require qualified appointments (based on conversion rate qualified to sale)

To get qualified appointments we require leads (based on conversion from lead to qualified)

Divide this number by 12 to get your monthly number which is.....

Your Monthly Leads Number is >>>>>

What you need to know to find your number

Average Job Size

Conversion Rate % Lead to Qualified Apt

Conversion rate % Qualified Apt to Sale

And that's it

Everyone can do this. It's very simple to find out your average job size by simply going back and looking at your last 10-20 jobs or even better if you have a CRM with this in place at quick glance (which you should)

On your CRM look at leads to qualified and get a %

Do the same for qualified to sale A VA will be able to pull this together for you in 30 minutes MAX

To conclude

IF your lead amount is lower than your number you are slowly running out of work!!

In which case we must look at lead generation again

(Print this page if required)

Tick When
done

☐

Establish your number ^^

☐

Ascertain how many leads came into your
business last month

☐

Set up tracker such as CRM to track
leads/sales (ie CRM)

☐

**Please go to your Kujabi Quiz & Assessment
Page and complete the Yes/No question**
